ANALYSIS OF DATA FROM THE ENERGETIC GAMMA-RAY  
EXPERIMENT TELESCOPE ON THE GAMMA RAY OBSERVATORY

NASA GRANT # NAG 5 1742

Principal Investigator: Donald A Kniffen

February 15, 1993 - August 15, 1995

**RESEARCH REPORT**

**(1) SUMMARY**

The work under the Grant has involved continued participation with the Compton Gamma Ray Observatory Energetic Gamma-Ray Experiment Telescope (EGRET) Team in the analysis of data obtained during instrument operations and the preparation of scientific papers and proposals for future observations. The Principal Investigator (PI) has been a co-author on a total of 72 papers published in refereed professional journals since the beginning of 1991, plus many other non-refereed publications, and contributed and invited papers at professional meetings and IAU telegrams. The EGRET team continues to submit IAU Astronomical telegrams and present many papers at scientific meetings. The EGRET Team was also successful on many proposals for the Cycle 5 portion of the mission, including long high galactic latitude studies of the diffuse extragalactic radiation in both the Northern and Southern Galactic Sky. These latter studies will be used in a effort to establish whether this radiation is truly diffuse or the sum of radiation from unresolved discrete sources such as radio-loud quasars. The Cycle 4 proposal include the EGRET Team, and Drs. Floyd Stecker, Mike Salamon and John Miller.

The effort by the PI has involved working remotely by internet connection on the Goddard Space Flight Center Computers where the EGRET data are archived. Students have monitored instrument performance, performed Viewing Period Analyses and analyzed data remotely and will continue to do so. The PI has completed the detailed analysis of thirteen viewing periods to search for point sources and this work has been used in developing the first and second EGRET catalog of sources, published in Supplements to the **Astrophysical Journal**.

The only travel performed on this Grant activity in the last reporting period has been several trips to the Goddard Space Flight center for joint work with other EGRET Team members and for EGRET Team meetings, plus summer 1995 residence at The Goddard Space Flight Center for research directly related to this Grant. The Principal Investigator also presented a paper on the current status of the EGRET study of the

diffuse extragalactic gamma radiation at the 3rd Compton Science Symposium in Munich, Germany in June. The PI was also the Principal Investigator on one on a Cycle 5 proposal for continued diffuse studies. We have received notice that this proposal was accepted.

The PI has completed a paper in draft form on EGRET observations of the Gamma-Ray Source 2CG135+01. This paper should be submitted shortly. Three other papers are in progress.

A number of papers have been published in the last reporting period, and several others are in press currently. A summary of the publications is attached below.

## (2) PROGRESS

The progress of major efforts under this grant are given below:

- (a) The PI continues to participate in the preparation of many papers for publication in various journals for astronomy and astrophysics.
- (b) PI prepared a Cycle 5 proposal on behalf of the EGRET Team entitled "Continued Investigation of the High Latitude Diffuse Gamma-Ray Emission."
- (c) The PI will continue to analyze a portion of the viewing periods for the presence of discrete source with student participation at Hampden-Sydney College.
- (d) The PI has prepared a draft of a paper describing the EGRET high energy gamma-ray observations of the COS-B source 2CG135.
- (e) The PI is leading an effort to study the spatial fluctuations in the diffuse extragalactic gamma radiation in an attempt to estimate the contribution of unresolved sources to this emission.
- (f.) The PI is participating in the preparation of a paper on the contribution of unresolved pulsars to the observed galactic diffuse gamma-radiation with Matthew Bailes and Joe Fierro.
- (g) The PI continues to attend EGRET Team Meetings as possible and works closely with the rest of the EGRET Team on data analysis.

#### (4) PLANNED ACTIVITIES

In the coming period, several publications will be completed, the PI will continue to analyze EGRET data and viewing periods, and frequent visits will be made to the GSFC for collaboration with the EGRET Co-Investigators. Four papers, currently in progress, on EGRET results will be completed and submitted for publication. The Cycle 5 proposal activity to analyze the diffuse extragalactic gamma radiation will continue similar work done in the previous phases. The GSFC EGRET team will be supported in data reduction and operations activities, and EGRET Team meetings will be attended. Scientific results will be presented at future scientific meetings. This work will be done under a new Cooperative Agreement 5-93 with the EGRET Principal Investigator, so this report concludes the activity under the current Grant.
